BUILDING COMMUNITY

WHAT IS NEXT?

1. The AXIS

The volume of the MNV CC was decided to be placed next to the Church on the main square. It is supposed to connect both sides of MNV with one reason: Bring back life and security. The design tries to respect the Curch - City Hall AXIS and offer a pleasant passage along.

2. The VOLUME

The fist attempt of designing the Community Center volume was to copy the longitivity of the free parcel next to the Church of MNV. Because of the different needs of the community it was decided that the volume is to be devided into three separated blocks.

3. The FORM

The final placement of the volumes was decided to copy the line of the placement of the Church to provoke the curiosity of the passanger. This way an interesting semi public space was created that opens the opportunity to create a gathering spot for the people.

4. The FUNCTION

To the block facing the square was given the function of Winery and Cheese tasting spaces combined with a Local Goods Shop. The second block that is placed in between the two was given a funct of a Multifunctional building with its own kitchen, stage. The last block is hosting RED CROSS and BOY SCOUTS.

CH - CITY HALL   SQ - SQUARE   CC - COMMUNITY CENTER   CH - CHURCH

1 - WINE AND CHEESE TASTING / LOCAL GOODS SHOP

2 - MULTIFUNCTIONAL BUILDING / BAR

3 - REDCROSS / BOY SCOUTS

COMMUNITY CENTER
- LOCAL GOODS SHOP
- WINE AND CHEESE
- MULTIFUNCTIONAL BUILDING
- RED CROSS
- BOYSOUTS

PUBLIC SPACES
- OUTDOOR GATHERING AREA
- STAGE
- PLAYGROUND
- PARK
- FONTANIN
- ICE SKATING RINK

1. THE CURRENT CONDITION...

Problem of the existing urban plan of the village is that the square which is supposed to be the main DOMINANT is devided into two public spaces by a two-way road placed in the middle. These spaces are not serving any purpose, the greenery which was present before the tornado is gone.

2. THE IMPORTANT AXIS...

The solution of the urban concept started with solving the problem with the dividing main road. In order to achieve one space in the center of the village, the design propposes a street divided into two one-way roads, which unifies an open public space and limits the

3. THE MAIN POINTS...

Following the three main AXIS - four POINTS are added to the concept of solving the public spaces that predicts the movements of the pedestrians. With this approach, the most important spots are created for different activities that would attract the passenger in an unique way.

4. THE CONNECTING PATHS...

The new pathways copy the organic flow of nature. This design is proposing a new scene of the village Moravska Nova Ves without forgetting of vernacular architecture. The traditional forms are only used in the design of the CC which copy simple squares with saddle roofs.c
